About this document

This document describes the new features and bug fixes introduced in this build of DITA CMS Release 4.1.

Release notes

Updating the cms_query.dtd file

When releasing a TEXTML query, the following message was sometimes displayed: Attribute "xml:lang" must be declared for element type "elem".

To solve the issue, you must update the *cms_query.dtd* file.

1. **Download the updated *cms_query.dtd* file from the following URL:**

http://cms.ixiasoft.com/downloads/system_config/4.1/

2. **Open the TEXTML Administration perspective.**
3. **Connect to your server and Content Store.**
4. **Navigate to the `Repository/system/conf/dtd` directory.**
5. **Right-click the `dtd` directory and select Insert Documents...**

The **Insert Documents Dialog** window appears.

6. **Click Add File and browse to the directory where you downloaded the file.**
7. **Select the *cms_query.dtd* file and click Open.**

The folder is added to your list of files to be imported.

8. **In the Set Options:**

- Select **Add**.
- Select **Replace**.
- Clear **Indexable**.

9. **Click OK.**
